

Straight union with sealing edge now also in PA

Some type of sealing is usually required – but it doesn't always have to be teflon tape! Unions with a sealing edge are now also available in the PA range and make your daily work easier.

The sealing principle which uses a sealing edge has been used successfully on SERTO brass and stainless steel unions for many years. This eliminates – under ideal circumstances – the need for teflon tape or O-rings on the screw-in side. If the teflon tape is applied incorrectly, for example, residue can enter the flow, in turn damaging pumps and valves. SERTO unions with sealing edge are a simple and effective way to avoid such problems.

The product range consists of several core sizes that are typically used in most applications. If there is enough demand, other connections sizes can also be manufactured. Details are below. The new SO 31124 series is available immediately ex stock.

Fig. 1: Detailed drawing of sealing edge principle

Material number	SERTO type
168.1161.100	SO 31124-6-1/8
168.1161.110	SO 31124-6-1/4
168.1161.160	SO 31124-8-1/8
168.1161.170	SO 31124-8-1/4
168.1161.270	SO 31124-10-1/4
168.1161.280	SO 31124-10-3/8
168.1161.380	SO 31124-12-1/4
